## **EVACUATION AND PANIC CONTROL**

**Panic:** A sudden unreasonable terror often accompanied by mass flight.

The emergency movement of people is always best accomplished in a supervised manner. Personnel trained in proper evacuation methods will make relocation of any amount of people a safe operation.

**Explanation of Evacuation Terms:**

**HORIZONTAL EVACUATION:** The movement of people across floors to safe refuge areas - stairwells, fire escapes, etc.

**VERTICAL EVACUATION:** The movement of people either down or up stairwells, fire escapes, or on occasion, elevators (but only upon the fire departments approval and under their direction for emergency use).

**PARTIAL EVACUATION:** The movement of a selected number of people, such as those immediately endangered or immediate floors above and below a fire.

If a fire is serious enough to evacuate one floor of the building, evacuate five; the fire floor, two above for safety and two below being utilized as a base of operations for the fire department. Once the fire floor and the floors closest to the fire have been evacuated, proceed to evacuate the remainder of the building.

While it is usually advisable to go downward in a building during a fire, there are occasions when it may be necessary or more desirable to go to an upper floor or the roof. If five floors need to be emptied, it may be better to have the uppermost of the five floors go upward due to the crowded stairway. Also, certain unpressurized stairwells may have smoke entering the stairway, due to doors being open because of evacuation or firefighting. In this case, people in the stairwell may be driven upward towards clearer air.

**PRECAUTIONS FOR GENERAL EVACUATION - Insist on the following:**

1. Listen for and heed directions given by building staff and the fire department.
2. **DO NOT USE ELEVATORS.**
3. **DO NOT RUN.** Remove high heeled shoes if necessary.
4. Use stairwell handrails, moving to the right-hand side if emergency crews are encountered.

5. Allow other people entering stairwell room but do not unnecessarily hold up travel. It is advised that each person alternate individual entry into the flow of traffic.
6. DO NOT SMOKE.
7. Do not spread faulty information, rumors, etc.
8. Assist those who are slow moving or in any way handicapped.

A method of head count should be known and implemented as soon as possible.

## SUGGESTED EVACUATION PLAN

An evacuation plan should be developed in advance with all personnel participating to work effectively. A practice evacuation should be held at least once every four (4) months, so that all personnel will be familiar with procedures that are necessary to effectively carry out the plan.

Each section/floor should have a fire warden appointed and it should be their job to see that all personnel are evacuated from their section/floor in the event of a fire or other emergency. The fire warden should be thoroughly familiar with location of all exits to the outside from each section/floor and they should assign the employees in their department an exit to use in the event of an evacuation. In other words, all employees in a department should not use the same exit, as this will tend to cause confusion and a congested situation at the exits. This can cause serious injury to some of the personnel by being pushed down in the excitement.

NOTE: All restrooms should be checked.

NOTE: Each individual should be assigned an alternate exit in the event the normal one is blocked by fire, etc.

Each section/floor supervisor should assign certain personnel to assist in evacuation of visitors unfamiliar with the building exits.

The greatest danger in fires is panic caused by the fear of fire and smoke. Each person should be adequately trained to "KEEP THEIR HEAD" in a emergency, and calm the fears of others, should it become necessary. All persons in the building should be notified immediately in the event of fire or other emergency so they can move promptly to their assigned stations. They should be prepared to take whatever steps are thought best by those in charge.
