MY SkillsUSA FRAMEWORK STORY

SkillsUSA has shown me the value of communication in completing any task. While on a regional engineering team comprised of SkillsUSA members from multiple pathways, we often found ourselves struggling to communicate effectively or at all. Throughout this experience our advisors took a hands-off approach to the project, allowing us to figure out how to function on our own. Through this experience we managed to grow as a team and figure out not only which communication style worked for ourselves, but for each other. Thanks to SkillsUSA I not only know the value of communication but how to use it effectively to be successful in my career.

CTE BELIEF STATEMENT

I believe career and technical education (CTE) directs students toward a brighter future in which their passions and goals are discovered and achievable. Through the many pathways and career opportunities CTE provides, any student can find success in his or her future.

FUTURE GOALS

After high school, I plan to further my education as a journalist and public servant. In these positions I hope to make the lives of American citizens easier and informed, as our country leads the world into the future.
