CTE Belief Statement

I believe CTE is a way for student leaders to find their true passion by giving them hands-on learning and getting them prepared for the future workforce. CTE allows the student body to connect and develop as a whole with others that share the same interest while enhancing their professional skills. CTE provides various opportunities for driven students to connect with many industries and businesses to help create pathways for future success.

My Framework Story

Before I joined my CTE program, I was a very irresponsible person. I always thought that if I did a lot of extracurricular activities, I would not have to worry about my academic classes. Other than in my science class, I never turned in assignments on time and never took my classes seriously. As soon as I joined CTE, that entire mindset went out the window. My CTE instructor taught me the importance of education and how powerful knowledge is. She helped me get on track, and I soon became very responsible with all my work. I started turning in my assignments on time, which I know will help me in my future.

Framework Story Essential Element

Responsibility
