CTE Belief Statement

I believe that career and technical education prepares students for specific career pathways by providing learning environments designed to strengthen their technical and employability skills that are required for employment. CTE programs are the foundation of learning for students who have desires to develop skills throughout the career they wish to pursue.

My Framework Story

Setting up events isn’t an easy task, but with a little help developing my planning, organizing and management skills, I have been able to create, set up and host many successful events. For example, my high school’s SkillsUSA chapter decided to create a fundraiser called the “Murder Mystery Dinner” through my culinary arts program. I had the opportunity to plan the dates, times, tickets, menus and decor. We organized committees to fulfill roles as servers, actors and band members. Our committee managed the event from start to finish. With our senior committee, I was able to shadow and learn, so I can use this workplace skill in the future.
